International Freephone Service (IFS)**

ITU-T Recommendation D.115

ITU-T D-SERIES RECOMMENDATIONS
GENERAL TARIFF PRINCIPLES

TERMS AND DEFINITIONS	D.0
GENERAL TARIFF PRINCIPLES	
Private leased telecommunication facilities	D.1–D.9
Tariff principles applying to data communication services over dedicated public data networks	D.10–D.39
Charging and accounting in the international public telegram service	D.40–D.44
Charging and accounting in the international teletext service	D.45–D.49
Principles applicable to GII-Internet	D.50–D.59
Charging and accounting in the international telex service	D.60–D.69
Charging and accounting in the international facsimile service	D.70–D.75
Charging and accounting in the international videotex service	D.76–D.79
Charging and accounting in the international phototelegraph service	D.80–D.89
Charging and accounting in the mobile services	D.90–D.99
Charging and accounting in the international telephone service	D.100–D.159
Drawing up and exchange of international telephone and telex accounts	D.160–D.179
International sound- and television-programme transmissions	D.180–D.184
Charging and accounting for international satellite services	D.185–D.189
Transmission of monthly international accounting information	D.190–D.191
Service and privilege telecommunications	D.192–D.195
Settlement of international telecommunication balances of accounts	D.196–D.209
Charging and accounting principles for international telecommunication services provided over the ISDN	D.210–D.279
Charging and accounting principles for universal personal telecommunication	D.280–D.284
Charging and accounting principles for intelligent network supported services	D.285–D.299
RECOMMENDATIONS FOR REGIONAL APPLICATION	
Recommendations applicable in Europe and the Mediterranean Basin	D.300–D.399
Recommendations applicable in Latin America	D.400–D.499
Recommendations applicable in Asia and Oceania	D.500–D.599
Recommendations applicable to the African Region	D.600–D.699

ITU-T Recommendation D.115

Tariff principles and accounting for the International Freephone Service (IFS)

Summary

This Recommendation sets out the general principles for charging and international accounting to be applied by Administrations for the provision of the international freephone service which is described in ITU-T Rec. E.152.

With regard to tariff and accounting principles, the **International Freephone Service (IFS)** is a service where the subscriber can be allocated a special (freephone) number and the charges for all calls to this number are paid by the respective subscriber instead of by the originating caller.

Source

ITU-T Recommendation D.115 was approved on 4 June 2004 by ITU-T Study Group 3 (2001-2004) under the WTSA Resolution 1 procedure.

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure e.g. interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementors are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database.

ITU-T Recommendation D.115

Tariff principles and accounting for the International Freephone Service (IFS)

1 Tariff structure

1.1 Tariff components

1.1.1 The tariff for the service should normally consist of two components:

- a network access component;
- a network utilization component.

1.1.2 The network access component, normally intended to cover the cost of making the service available, represents the cost of the service which is not dependent on network utilization.

It corresponds to what is generally known as the "network connection charges".

1.1.3 The network utilization component normally covers the costs which are dependent on network utilization.

1.2 Network access component

1.2.1 Access charges should be levied for each subscription and should normally be independent of network utilization. They may consist of:

- a) an initial fee (non-recurring);
- b) a subscription rental (payable at certain intervals, e.g., monthly or quarterly, until the subscription is terminated).

1.2.2 The access charges shall not be included in international accounts between Administrations and their establishment is strictly a national matter.

1.3 Network utilization component

1.3.1 These charges may vary by call duration and country origin and time of day.

1.3.2 Composition

Charges for network utilization may consist either of a communication charge or of a minimum charge/a minimum average charge per call.

2 Collection charges

2.1 Collection charges are a national matter, but the structure and level should encourage international cooperation for the development of the service.

2.2 Normally, chargeable time for calls begins and ends on the same basis as for the automatic international telephone service.

3 International accounting

3.1 IFS should be accounted for and settled using the same principles and methodologies used for other international telephone services and should be bilaterally agreed to by the two Administrations.

3.2 The terminating Administration, having the charging responsibility for IFS, is also responsible for the establishment of international accounts.

3.3 As an automatic service, IFS should be accounted at the same rate as the international telephone service. However, as international telephone accounting rates become cost orientated in accordance with ITU-T Rec. D.140, Administrations may bilaterally agree to apply when appropriate, different accounting arrangements which may be of a per call nature or duration related, to take account of the specific costs encountered in providing the service.

3.4 International accounts should identify usage associated with IFS separately.

3.5 Where cost-orientated rates have been agreed, and where costs for traffic to the IFS service originating from mobile networks or payphones differ from those originating from fixed-line networks, a separate rate may be bilaterally agreed for traffic originating from mobile networks and/or payphones. In each case, rates for fixed, mobile, and payphone should be in accordance with ITU-T Recs D.93 and D.140 and other relevant ITU-T Recommendations.

In case where the above-mentioned paragraph applies, suitable technical means need to be established to enable the IFS Service provider to identify mobile-originated and payphone-originated traffic separately from fixed-line originated traffic for both charging and accounting purposes. It is recommended that either:

3.5.1 A separate routing number be assigned to calls originating from mobile networks from the routing number employed for calls originating from fixed-line networks; likewise, a separate routing number should be assigned for calls originating from payphones when a separate rate is applied to these calls; or

3.5.2 The assigned codepoints for payphone and mobile in the Calling Party Category parameter of SS7 ISUP (and the Bearer Independent Call Control (BICC) signalling protocol) should be used by the IFS Service access provider (originating administration) to indicate the different call types (as indicated in ITU-T Rec. Q.764).

The assigned access code (dial-digit code) should not be changed in order to employ more than one routing number for call-origination purposes.

SERIES OF ITU-T RECOMMENDATIONS

Series A	Organization of the work of ITU-T
Series B	Means of expression: definitions, symbols, classification
Series C	General telecommunication statistics
Series D	General tariff principles
Series E	Overall network operation, telephone service, service operation and human factors
Series F	Non-telephone telecommunication services
Series G	Transmission systems and media, digital systems and networks
Series H	Audiovisual and multimedia systems
Series I	Integrated services digital network
Series J	Cable networks and transmission of television, sound programme and other multimedia signals
Series K	Protection against interference
Series L	Construction, installation and protection of cables and other elements of outside plant
Series M	TMN and network maintenance: international transmission systems, telephone circuits, telegraphy, facsimile and leased circuits
Series N	Maintenance: international sound programme and television transmission circuits
Series O	Specifications of measuring equipment
Series P	Telephone transmission quality, telephone installations, local line networks
Series Q	Switching and signalling
Series R	Telegraph transmission
Series S	Telegraph services terminal equipment
Series T	Terminals for telematic services
Series U	Telegraph switching
Series V	Data communication over the telephone network
Series X	Data networks and open system communications
Series Y	Global information infrastructure, Internet protocol aspects and Next Generation Networks
Series Z	Languages and general software aspects for telecommunication systems
